

Please read all of the instructions and look at the pictures before attaching the Mount.

ProClip USA may not be held liable for any damage to a vehicle before, during or after the installation or removal of this Tilt Swivel Mount.

ProClip USA may not be held liable for any personal injury resulting from accident or improper use or installation.

The Tilt Swivel in the installation pictures may look different from the one you have received. However, the same instructions apply.

Overview Picture

1. Unscrew the center screw and remove the faceplate

2. Place the base plate of the Tilt Swivel onto the ProClip dash mount (or any other mount or flat surface) so the holes match and screw the plate to the ProClip dash mount using the enclosed screws. (As long as you are screwing the plate to the ProClip you don't have to remove the cover of the adhesive tape)

3. Place the faceplate over the base plate and screw the pieces together. Adjust the faceplate to desired position and tighten the screw further. This screw also controls the pivot, tighter for a firm hold and lose for more (easier) movement/angling.

The Tilt Swivel is now in place as shown in the overview picture above. You can attach any holder or car kit to the Tilt Swivel.
