

**Item No.: 215060
Device Mounting Adapter**

Male Plate Only

Installation Instruction

Overview Picture

Please read all of the instructions and look at the pictures before attaching the ProClip.

ProClip USA may not be held liable for any damage to a vehicle before, during or after the installation or removal of this dashboard mount.

ProClip USA may not be held liable for any personal injury resulting from accident or improper use or installation.

The ProClip mount in the installation pictures may look slightly different from the one you have received. However, the same instructions apply.

Note: The adhesive tape referred to below does not leave any marks or damage the dashboard, and it is easy to remove.

1.
Place the male plate over the matching holes in the back of your device. (If you have any other mounting device attached this has to be removed first.)
Screw the plate to the device using the enclosed screws.

2.
Attach the female plate to the ProClip Vehicle Mount by placing it over the matching holes in the mount and screw it to the mount using the enclosed screws.
Note: If you have received a vehicle mount that has 4 small holes as the square pattern (AMPS) use the self tapping screws. If you have received a vehicle mount that has 4 bigger holes as the square pattern use the machine screws and nuts.

3.
Slide the Device down into the female plate on the vehicle mount until it clicks into place.
