

Item No.: 215200

## Tilt Swivel Mount, Large

### Installation Instruction

### Overview Picture

Please read all of the instructions and look at the pictures before attaching the ProClip.

**ProClip USA** may not be held liable for any damage to a vehicle before, during or after the installation or removal of this Mount.

**ProClip USA** may not be held liable for any personal injury resulting from accident or improper use or installation.

The **ProClip** Mount in the installation pictures may look slightly different from the one you have received. However, the same instructions apply.

**Note:** The Mount can be attached to any mounting bracket or flat surface with the applicable screws enclosed - self-tapping screws if the mount has small holes or machine screws with nuts if the mount has large holes.

1.  
Unscrew the screw in the center of the Mount and remove the Face Plate from the Tilt Swivel base plate.

2.  
Place the Tilt Swivel base plate onto your mounting bracket. Due to the size of the base plate there are no matching hole patterns so you have to pre-drill the holes into the mount. Attach the base plate by using the applicable screws enclosed – self-tapping screws if the mount has small holes or machine screws with nuts if the mount has large holes.

3.  
Place the Face Plate onto the Tilt Swivel base plate and attach it with the center screw. This screw also controls the pivot, tighter for a firm hold and loose for more (easier) movement/angling of the holder.

4.  
The Holder is now in place on the mount.

You can now attach your holder to the face Plate.
