

Item No.: 848693
**Adjustable Holder with Tilt Swivel
for Cable Attachment**

For Original Apple Style Cable Connector

Fits all Apple iPods with Dock Connector

Installation Instruction

Overview Picture

Please read all of the instructions and look at the pictures before attaching the ProClip.

ProClip USA may not be held liable for any damage to a vehicle before, during or after the installation or removal of this Holder.

ProClip USA may not be held liable for any personal injury resulting from accident or improper use or installation.

The ProClip Holder in the installation pictures may look slightly different from the one you have received. However, the same instructions apply.

Note: The holder can be attached to any mounting bracket or flat surface with the applicable screws enclosed - self-tapping screws if the mount has small holes or machine screws with nuts if the mount has large holes.

1.
Place the holder with the inside side upwards. Place the plug into the lower part of the holder. Make sure the mark is pointing upwards, so you can see it when placing the plug into the holder. Place the enclosed cover over the plug; make sure the plug is in the correct position. Press the cover towards the Holder and flip the Holder so the backside is upwards. Attach the cover with the enclosed screws. The cable is in place.

2.
Loosen the screws in the back of the holder. Pull the sides of the holders apart. Place the device in the holder. Press the sides of the holder together so the device is in a firm position but can be slid in/out of the holder. Tighten the screws in the back of the holder.

3.
Unscrew the screw in the center of the Holder and remove the holder from the Tilt Swivel base plate. Place the Tilt Swivel base plate over the matching holes in your mounting bracket (demo ProClip mount shown in picture) Attach the base plate by using the applicable screws enclosed - self-tapping screws if the mounts has small holes or machine screws with nuts if the mount has large holes. Place the Holder onto the Tilt Swivel base plate and attach it with the center screw. This screw also controls the pivot, tighter for a firm hold and lose for more (easier) movement/angling of the holder.
